7. (original) A method of reducing waste-water effluent stream produced during the conversion of trona ore into sodium bicarbonate comprising:  
first converting said solution-mined trona according to a monohydrate process into sodium carbonate with the concomitant production of a first waste-water effluent stream containing sodium carbonate; and utilizing said waste-water effluent as a feed stream for a process of converting sodium carbonate into sodium carbonate decahydrate with the concomitant production of a first downstream waste-water effluent stream, and converting said sodium carbonate decahydrate to sodium bicarbonate with the concomitant production of a second downstream waste-water effluent stream, whereby the total amount of effluent waste-water in the two aforesaid downstream waste water effluent streams is less than the amount of the effluent waste water in the said first waste water effluent stream.
